WEEKLY SNOTEL SNOWPACK AND PRECIPITATION REPORT  
 As of Tuesday, October 12, 2010

Happy new Water Year 2011! The beginning of the water year has been variable as usual, where any precipitation will result in dramatic shifts in percent of average. Please see the state web pages for specific rain and snowfall amounts for the basins. At the end of the report I have attached the end of water year 2010 cumulative precipitation totals for the West.

The National Water and Climate Center creates and transmits the weekly Western US Basin snowpack and cumulative precipitation report every Monday. This report is based on an analysis of data collected at over 680 NRCS SNOTEL sites in the Western United States. A narrative description of significant changes and events will be included in this report as conditions warrant. Please contact one of the names below if you have any questions or comments.

The Snow Water Equivalent Percent of Average represents the snow water equivalent found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. The Accumulated Precipitation Percent of Average represents the total precipitation beginning October 1st) found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day.

\* = Data are not available or data may not provide a valid measure of conditions for over half of the sites within the basin. Refer to the individual state reports for a complete data listing and basin analysis.

Units = inches for the Current and Average Snow Water Equivalent and Total Precipitation values

Reference period for average conditions is 1971-2000.  
Provisional data, subject to revision.

WEEKLY SNOTEL SNOWPACK AND PRECIPITATION REPORT  
 As of Thursday, September 30, 2010

**Below is the final cumulative precipitation for water year 2010 for the Western Mountain SNOTEL stations.** This is a good indication of the conditions in the watersheds in the Western states, and if they have a surplus or deficit to begin the 2011 water year.

The National Water and Climate Center creates and transmits the weekly Western US Basin snowpack and cumulative precipitation report every Monday. This report is based on an analysis of data collected at over 680 NRCS SNOTEL sites in the Western United States. A narrative description of significant changes and events will be included in this report as conditions warrant. Please contact one of the names below if you have any questions or comments.
